## The People Behind the Software

While Stuart Smith was working as an asset management consultant on the 2000 Sydney Olympic Games, he realised the gross inefficiencies and shortcomings of the asset hand over process.

Stuart knew there must be a way to transform the process from manual and people-driven, to integrated, collaborative, and data-driven. He used technology to develop a process that would revolutionise project handover.

He called it OmTrak.

OmTrak has been used on \$250 billion of construction projects around the world.

The company behind the software is WebFM.
